Java IO I a

Useful tips/hints

Installing Java

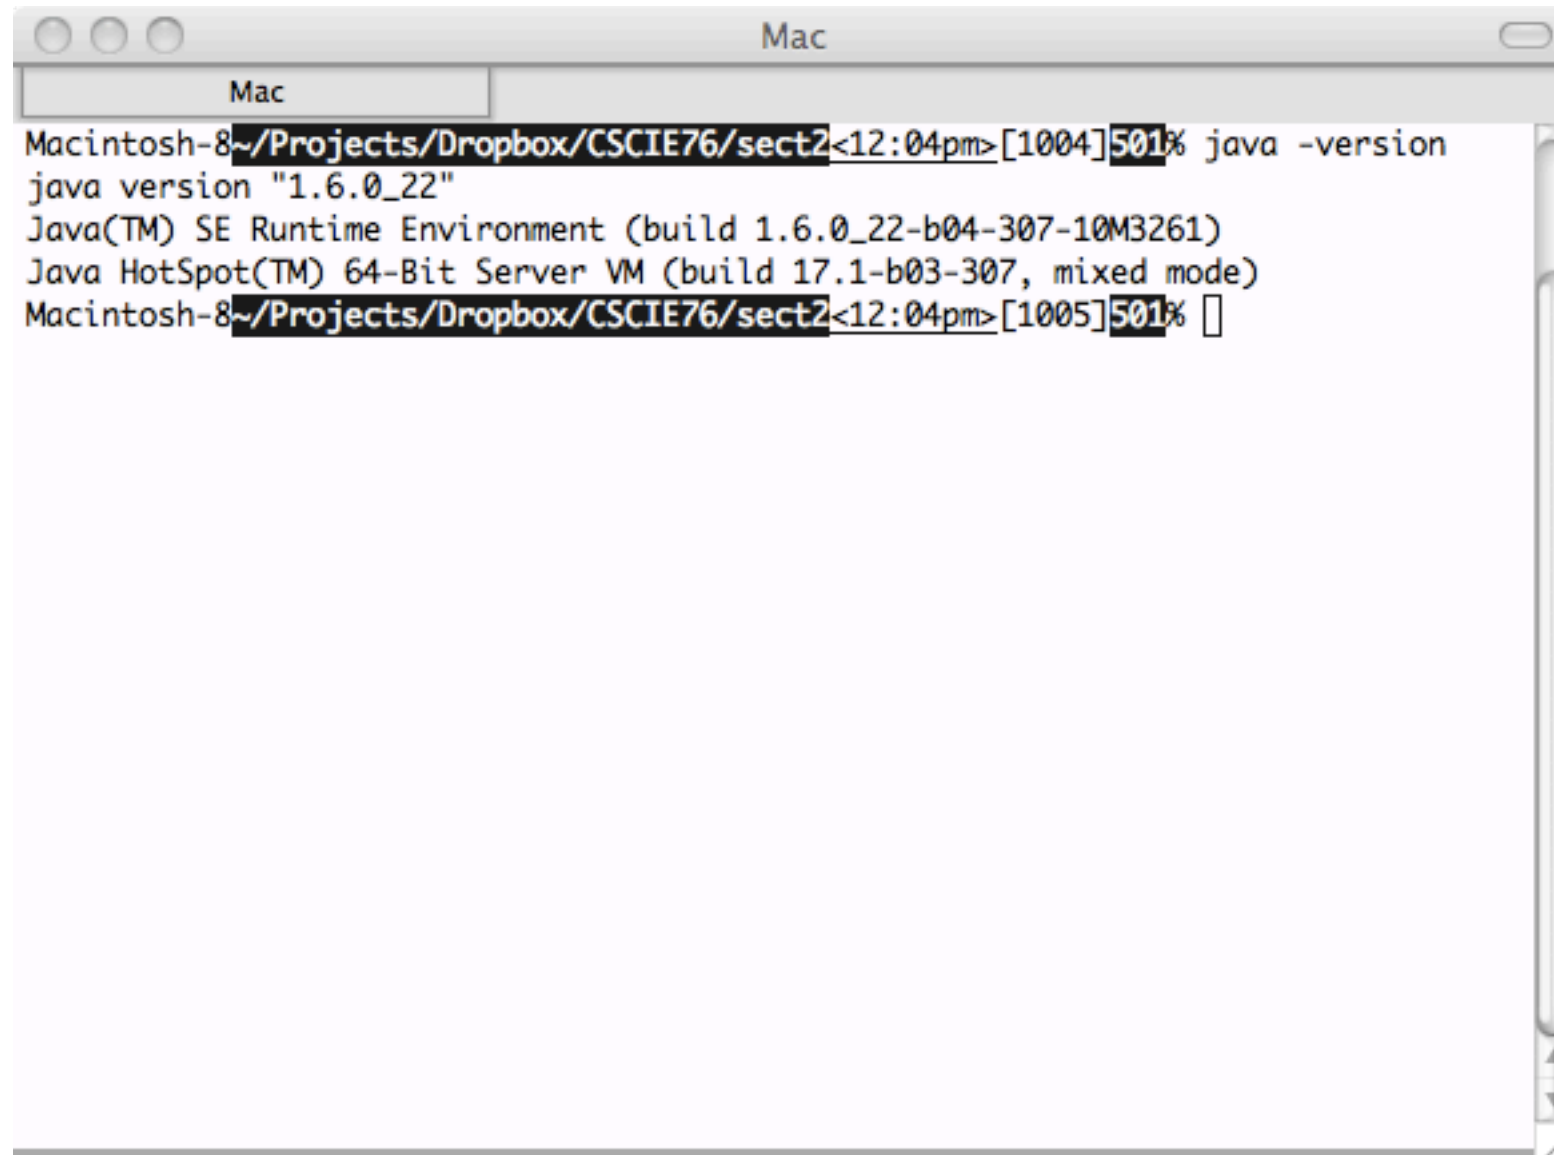

A little more straightforward on the PC:

<http://java.sun.com/downloads/>

Choose JDK SE 6 with Docs

For the Mac, java is updated with software update.

Check to see what version you're using:

A screenshot of a Mac OS X terminal window. The window has a title bar with three buttons (red, yellow, green) on the left and a close button on the right, with the title "Mac" in the center. Below the title bar is a tab labeled "Mac". The terminal content shows a command prompt "Macintosh-8~/Projects/Dropbox/CSCIE76/sect2<12:04pm>[1004]501%" followed by the command "java -version". The output consists of three lines: "java version \"1.6.0_22\"", "Java(TM) SE Runtime Environment (build 1.6.0_22-b04-307-10M3261)", and "Java HotSpot(TM) 64-Bit Server VM (build 17.1-b03-307, mixed mode)". The prompt is then followed by "Macintosh-8~/Projects/Dropbox/CSCIE76/sect2<12:04pm>[1005]501%" and a cursor. A vertical scrollbar is visible on the right side of the terminal window.

```
Macintosh-8~/Projects/Dropbox/CSCIE76/sect2<12:04pm>[1004]501% java -version
java version "1.6.0_22"
Java(TM) SE Runtime Environment (build 1.6.0_22-b04-307-10M3261)
Java HotSpot(TM) 64-Bit Server VM (build 17.1-b03-307, mixed mode)
Macintosh-8~/Projects/Dropbox/CSCIE76/sect2<12:04pm>[1005]501% 
```

Java Docs

<http://java.sun.com/javase/6/docs>

Pretty printing your Strings

Or printf and you.
