web apps v. native apps
How PhoneGap Works

1. Build your app once with **web-standards**
   Based on HTML5, PhoneGap leverages web technologies developers already know best... HTML and JavaScript.

2. Wrap it with **PhoneGap**
   Using the free open source framework or PhoneGap build you can get access to native APIs.

3. Deploy to **multiple platforms**!
   PhoneGap uses standards-based web technologies to bridge web applications and mobile devices.
